## WAUGHT WAITING AND WATCHING FOR CONGRESS

But It is Certain He Will Soon Make Announcement of His Candidacy.

(SPECIAL TO THE TELEGRAM)  
WESTON, July 31.—While H. Roy Waugh, the genial gentleman from Upshur, has not technically cast his chapeau in the ring for the Republican nomination for Congress in the Third district, he is playing the watchful waiting role, and will formally announce his candidacy when the opportune time is at hand. At least this was the general trend of Mr. Waugh's conversation this week during the time spent here in the transaction of legal affairs.

## FLORAL FEATURES OF ENCAMPMENT AT WASHINGTON

Are to Be Very Elaborate and Very Beautiful According to Present Plans.

WASHINGTON, July 31.—Government officials are joining the citizens committee in endeavoring to make the Grand Army Republic encampment, to be held here the latter part of September, a great success. Along this line special floral designs are being laid out on the lawns of the capitol building, and other government buildings. These designs include insignia of the Grand Army Republic, the Woman's Relief Corps and allied organizations to be here during the convention.

Under the direction of superintendent of the capital building, Elliott Woods, two flower beds have been

Lewis, being candidates for the nomination. He paid his respects to all these gentlemen, but declared that he would have very little trouble in carrying five of the eleven counties in the district, even though the three named gentlemen were in the race. Mr. Waugh did not specify the counties that he felt confident of carrying, but he let it be known that his claim was no idle boast.

When asked as to his opinion of the strength of ex-Governor A. V. White, who has already announced his candidacy for the United States Senate, Mr. Waugh refused to make any comment other than he considered Mr. White a strong candidate. He refused to discuss the general political situation in West Virginia, but he did state that there was no doubt in his mind that the Republican party would sweep the state next year with the greatest majority it has polled for years.

laid out on the sloping grounds on the west front, designed to add to the attractiveness of the grounds during the encampment. On the north, or Senate wing, the grand army badge, seventy-five feet long and twenty feet wide, has been the subject of the women's relief corps, of similar dimensions, have been reproduced. It is estimated that about thirty thousand plants were required to make these designs.

The eagle at the top of the Grand Army Republic badge is colored, golden color, while the other parts, dark red was used in making the crossed cannon. For the main part of the design, the national colors, the alternating red and white stripes are of fescue and centurea, and the blue field is a mass of ageratum. The five pointed star pendant, is outlined with yellow voleus, while the bronze effect of the metal was produced by the use of acelypha, a bronze leaf foliage plant. The other design made have been similarly treated with various kinds of plants to bring out the color scheme.

Surrounding the Sherman statue, just south of the treasury building on Pennsylvania avenue, and accessible to the visitors, four Army Corps badges have been produced with the use of various foliage plants. These designs, about twenty feet in diameter, were laid out under the direction of Charles Henlo, superintendent of gardens. On the north side of the statue is the badge of the Fifteenth corps, on the west side of the badge of the Fourteenth corps, the badge of the Twentieth corps being on the south side and the Seventeenth corps being represented on the east side. About seventy-five thousand plants have been used in making these badges.

Superintendent George W. Hess, of the Obelisk Gardens, has had overhauled and equipped with modern apparatus the magnificent Barthold fountain that stands in the center of the gardens. This fountain was exhibited at the centennial exposition by the French government and at the close of the exposition was presented to this government and removed to its present location. The fountain when completed will be an added attraction to the gardens. The fountain will be illuminated at night.

## FINE PRIZES ARE OFFERED TO WINNERS

Of Corn Club Contests in This State by the National Woolen Mills.

PARKERSBURG, July 31.—The National Woolen Mills, a bustling business house of this city, has decided to make an annual affair of the plan instituted by them several years ago of giving a free suit of clothes or overcoat to the winner of the corn club contests which have been introduced in a number of the counties of this state. Their purpose is to encourage the "back to the farm" movement and to stimulate the boys of the country to greater effort and industry. The plan last year proved to be a decided success. The same offer was made this year to William H. Kendrick, state agent in charge of these contests, and the following letter has been received in reply, showing the appreciation with which this generous offer was received.

"Morgantown, W. Va., July 26, 1915.  
"Mr. George W. Strong,  
"National Woolen Mills,  
"Parkersburg, W. Va.  
"My dear Mr. Strong:

"We certainly appreciate your generous offer of a suit of clothes or an overcoat to be given to the boy making the best record in the following counties: Harrison, Monongahela, Cabell, Kanawha, Ohio and Wood.  
"Allow me to express our appreciation of this generous and helpful contribution and in behalf of the farm boys of West Virginia. We are certain that there could be no more useful premium offered.

"Any time that we can be of service to you I shall be very glad to have you call on us.  
"Yours truly,  
"WM. H. KENDRICK,  
"State agent in charge of Boys' Clubs,  
"U. S. Department of Agriculture."

The English language is spoken by more than 120,000,000 persons.

## WILSONBURG

WILSONBURG, July 31.—Prof. R. M. Fisher has arrived here from Philadelphia. He and Mrs. Fisher started to Atlantic City but did not get further than Philadelphia, where Mrs. Fisher became very ill and is now in the hospital at that place. All hope for her speedy recovery.

This place was visited with two heavy rains at night. The farmers report very bad weather for hay harvesting, but the rains are welcome to the masses as very hot weather prevails.

Harry G. Ashcraft, manager for the Hygrade powder for this district, reports extensive powder business for the month of July, employing two teams hauling explosives to the local stations.

Dr. H. J. Glenwood has been called to Glenwood to see John Ritter's baby who is very sick of flux.

Daisy Adams and Maud and Sadie Wilburg called on Charles Adams Friday.

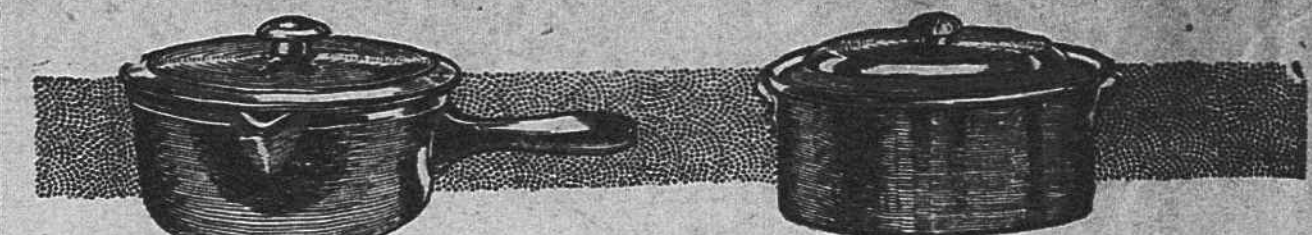

## BROTHERS FIGHT

And One Has the Other Arrested on Charge of Assaulting and Beating Him.

Slisco Winemiller, of Union Heights, is a prisoner in the county jail awaiting a hearing before Magistrate J. V. Carter on a charge of assaulting and beating his brother, Hess Winemiller. He will be tried at 7:30 o'clock Monday evening.

Winemiller was arrested late Friday evening in Magistrate Carter's office by Deputy Sheriff John Siers and was placed in jail. The brother's both reside at Union Heights and the trouble between them occurred at one of their homes there earlier in the week.

## Built like — "The Deacon's One-Hoss Shay"

THE best Pneumatic Tire is only as strong as its weakest part.

Strengthening its strongest parts is as useless as putting a fifth wheel on a wagon.

Yet this is often done to provide "Selling-feature" and "Talking Point."

The weakest part of every Pneumatic Tire is its Walls or Sides, not its Tread,—its Cotton Fabric or "Stocking," not its Rubber "Sole."

No price would be too high to pay for a material that, replacing Cotton in the Walls of Pneumatic Tires, would last as long as the Goodrich Rubber Tread could be made to wear.

Neither Silk, nor Linen, nor any other known fabric yet discovered is so good, for this purpose, as Cotton,—and choice long-fibred Cotton is the best material that money can buy for Tire Fabric.

WE use nothing less in Goodrich Tires, and test every foot of it up to 330 lbs. to the Square Inch, before we percolate it with the most adhesive Rubber Compound ever made for this purpose.

We then shape this rubberized fabric into Tires, with scrupulous care to have the tension on each square inch of fabric precisely the same,—that tension being controlled by a machine as sensitive as the eye, and infinitely more precise than the handwork of the most skilled operative could make it.

To do this work we have the most highly-trained men in the Rubber Industry,—trained in the Precision that practice and our 45-year EXPERIENCE make perfect.

NO Tire Manufacturer, if he received a price of \$200 per Tire, could put better fabric into the Walls of his Tires, use greater care, more sensitively adjusted Tension devices, or more adhesive Rubber between each layer of fabric.

Because, we know the vital importance of THE BEST in this part of the Tire, and use it there unsparingly.

Made as always, —the same reliable Construction, the same dependable Service—without anything whatever taken out of Quality, no matter what reductions in List-Price are ever made.

But,—notwithstanding all this,—the FABRIC is the part of the Tire which goes first.

Because the sides of the Tire do most of the work in running,—bending and stretching a million times an hour, in scores of different directions.

This bending of the sides causes Friction between the layers of Canvas working against each other,—Friction causes Heat—the Heat over-cures and dries out the Rubber Adhesive between layers, which then separate from each other, in spots, the threads weakening or wearing out chafing against each other.

Then you have, in due time, the incipient blow-out, or other form of Tire-Death.

PUT more layers of Fabric than we do in the walls, to strengthen them, and the friction increases, with faster deterioration of the Rubber through the greater heat engendered.

Put fewer layers, and the walls would not be strong enough to carry the load of the Car.

So there you are—Mr. Tire User!

Why put MORE layers of Fabric in the Walls of the Tire than will properly carry the load, when each additional layer is an additional developer of that FRICION-HEAT which is to Tires what Old Age is to Man?

THAT is the reason we build, in the Goodrich Tire, a carefully BALANCED Tire, emulating the famous example of "The Deacon's One-Hoss Shay" in which "the Sills were just as strong as the Thills and the Thills as strong as the floor."

The Maximum Fabric efficiency and THEN,—the rest of the Tire built up to that.

Result—The most RESILIENT Tire that can be made with Fabric Walls,—at the fairest price per Mile of performance.

Why pay more for any Tire?
